

# Bagram – Area 82

---

The Story So Far.....

---

# Introduction

---

- ★ [REDACTED] (GREMIO ASI PM)
- ★ Technical delivery by IT Services with help from C&W
- ★ This is a summary of how we got there, including:
  - 2 winters (neither really happened)
  - 5+ external partners
  - 1 minefield with added bomb and
  - 1 toilet block

# Why did we build this facility?

---

- ❖ GCOs wanted access to RT-RG
- ❖ RT-RG was based at Bagram Airfield and effective access required:
  - ◆ Single satellite hop connectivity
  - ◆ Requiring A new in theatre network
  - ◆ Requiring In-theatre peering with NSA

RT-RG: REAL-TIME  
REGIONAL GATEWAY

Bagram Airbase, Afghanistan - AF1

# Where we started

---

- ❖ Container based solution at Souter
- ❖ Fit a peering point into 1 container (5 racks)
- ❖ Try to link this all to RT-RG at Bagram
- ❖ Winter was approaching and there was a risk of bad weather / frozen ground.

# Area-82 was still just a good idea

---

# Then came the Minefield

---

- ❖ Space available on Area 82 – if we don’t mind it being in a minefield.
- ❖ Oh, and by the way – there is a 500lb unexploded bomb in the middle of it....
- ❖ Souter not an option
- ❖ Area-82 becoming a building site
- ❖ Still in containers

# Then came the data centre move

---

- ❖ RT-RG moving into new data centre so our plans delayed once more

- ❖ Space available for our racks and plans to clear the minefield are drawn up

# Area-82 was also changing fast

# “The Minefield is Cleared”

---

- ❖ All we needed was a volunteer to go check out this rumour

# Then the other guests turned up

---

- ❖ First the AROCC build started
- ❖ Then RED RIDGE appeared in the antenna field
- ❖ Then Liberty.....
- ❖ Then NRO.....
- ❖ Then NGA.....
- ❖ Then USAF.....
- ❖ Let the party begin.
  - ◆ Who pays?
  - ◆ How do we design the layout?
  - ◆ Any more partners? Have we enough power?
  - ◆ Winter was approaching again – along with the risk.
  - ◆ Do we want temporary space on top of the toilets?

# Another Survey is needed

---

But the Bagram Hilton is overbooked that night...

# Progress was being made

---

We finally have our very own hole!!

# Quite Quickly by this point...

---

Which soon started to look like something we could use

# Finally the Build Begins

---

Afghan technology is deployed to complete the ground works

23 June 2010

SECRET

# No Expense is Spared

---

Only the best equipment is used

# Meanwhile, back with IT Services

---

We managed to get our hands on a plane!!

23 June 2010

SECRET

# Somewhere is Sunny Afghanistan

---

Not quite the 46° that had been promised

23 June 2010

SECRET

# C&W were building the Dishes

---

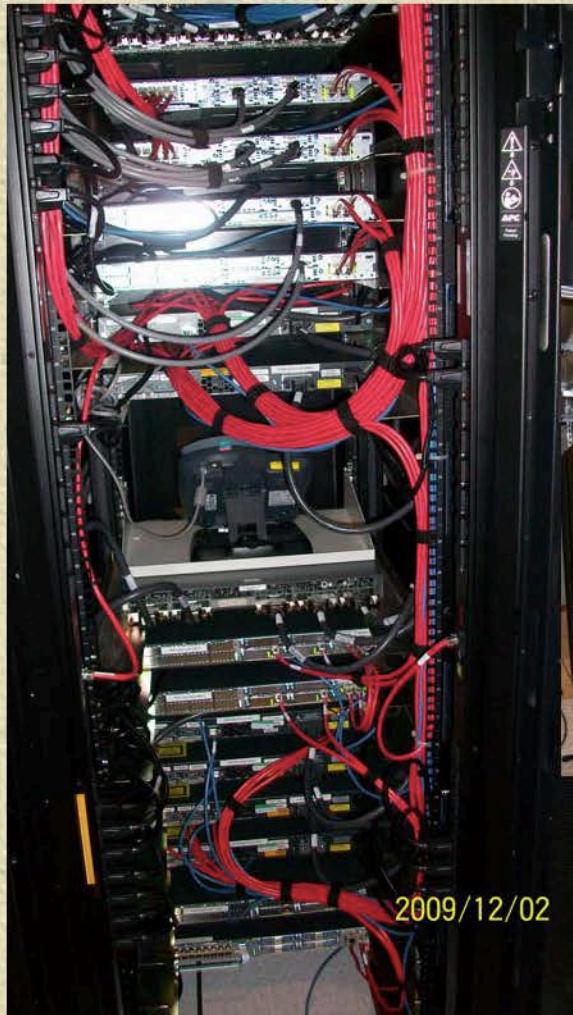

One man and his power tools ☺

23 June 2010

SECRET

# Whilst in a warm(er) data centre

---

All those wires needed putting back in the right place

And finally it all came together

---

2010/02/10

A well earned photo opportunity for the team

23 June 2010

SECRET

# RT-RG Deploys

---

- ★ Same 5 rack solution that we started with 18 months earlier
- ★ 3/ 4 spoke sites configured at IOC
- ★ Final desktop issues resolved and so far the deployment has been a big success.

# Area 82 today

---

Very different from when we started 18 months ago
